College Algebra

Test 2

Form A

Spring 2015

Name:				
Date:				

READ THESE INSTRUCTIONS CAREFULLY!

- $\bullet\,$ Circle or underline your final written answer.
- Justify your reasoning and show your work.
- If you run out of space, make a note and continue your work on the back of a page.

Algebra Facts

Quadratic Formula

If a, b, and c are real numbers and $a \neq 0$, then the solutions of the equation $ax^2 + bx + c = 0$ are

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}.$$

Absolute Value

- If |E| = F, then either E = F or E = -F.
- If $|E| \leq F$, then both $E \leq F$ and $E \geq -F$.
- If $|E| \ge F$, then either $E \ge F$ or $E \le -F$.

Geometry Formulas

Given points (x_1, y_1) and (x_2, y_2) , the distance between them is

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2},$$

their midpoint is

$$\left(\frac{x_1+x_2}{2},\frac{y_1+y_2}{2}\right),$$

and the slope between them is

$$\frac{y_2 - y_1}{x_2 - x_1}$$

Circles

The circle having center (h, k) and radius r is given by the equation

$$(x-h)^2 + (y-k)^2 = r^2$$

Lines

The standard form equation of a line looks like

$$ax + by + c = 0,$$

where a, b, and c are constants. The slope-intercept form is

$$y = mx + b$$
,

where m is the slope of the line and b the y-intercept. The point-slope form is

$$y - y_0 = m(x - x_0),$$

where m is the slope and (x_0, y_0) is any point on the line.

Parabolas

The parabola with horizontal directrix, vertex at (h, k), and signed focal length p is given by the equation

$$y = \frac{1}{4p}(x - h)^2 + k.$$

This parabola opens up if p > 0 and down if p < 0.

Ellipses

The ellipse with foci at $(\pm c, 0)$ and major axis 2a is given by the equation

$$\left(\frac{x}{a}\right)^2 + \left(\frac{y}{b}\right)^2 = 1$$

where $b^2 = c^2 - a^2$.

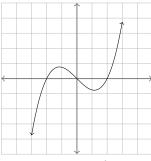

Transformations

 $\begin{array}{cccc} x & \mapsto & x-h & \text{Horizontal Shift} \\ y & \mapsto & y-k & \text{Vertical Shift} \end{array}$

 $x \mapsto \frac{1}{a}x$ Horizontal Stretch

 $y \mapsto \frac{1}{b}y$ Vertical Stretch

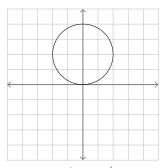

- 1. (10 pts.) Find an equation for the circle centered at (7,1) and having radius 4.
- 2. (10 pts.) Determine whether or not the following graphs are symmetric across the x-axis, across the y-axis, or about the origin.

x-axis: yes/no y-axis: yes/no origin: yes/no

x-axis: yes/no y-axis: yes/no origin: yes/no

x-axis: yes/no y-axis: yes/no origin: yes/no

- 3. (10 pts.) Find the average rate of change of $f(x) = x^3 x + 4$ from $x_1 = 1$ to $x_2 = 3$.
- 4. (10 pts.) Find an equation for the line passing through the point (-5,6) and having slope -1/3.

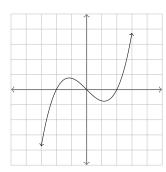

5. (10 pts.) Solve the following system of equations.

$$\begin{cases}
-5y + x &= 6 \\
6y + x &= 9
\end{cases}$$

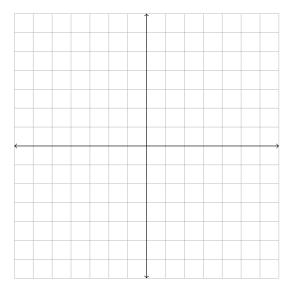

6. (10 pts.) Find an equation for the circle centered at (3,1) and passing through (-6,-2).

7. (10 pts.) Graphically transform the following graph in the space provided.

Shift right by 1 unit(s) and shift down by 3 unit(s).

8. (10 pts.) Plot the graph of the linear equation $y = \frac{1}{4}x + 3$ on the plane below.

9. (10 pts.) Find the zeros of the following function: $f(x) = x^2 + 2x - 3$

10. (10 pts.) Determine whether or not the following equations are symmetric across the x-axis, across the y-axis, about the origin, or none of the three.

(a)
$$x^4 + y^4 = 1$$

(b)
$$\frac{1}{y^2} + xy - \frac{1}{x^2} = 1$$

(c)
$$xy + y^2 = 2$$

Bonus. (10 pts.) Solve the following system of equations. (Hint: Draw a picture.)

$$\begin{cases} (x-1)^2 + y^2 = 4\\ (x+1)^2 + y^2 = 4 \end{cases}$$
